**AMENDMENTS TO THE SPECIFICATION:**

Please ADD the following new paragraph after the paragraph added in the previous Amendment filed August 28, 2003, which was added after the second paragraph on page 6 of the originally filed Specification:

Fig. 14 is a circuit diagram showing a preferred embodiment of an oscillator device according to the present invention.

Please REPLACE the second full paragraph on page 12 of the originally filed Specification with the following amended paragraph:

Also, in each of the above-described oscillator devices 10, between the base of the transistor 22 and ground, a circuit element, such as a variable capacitance element, may be connected in series or in parallel to the crystal oscillator 26 or the stripline resonator 27. By connecting such a circuit element in order to change the circuit constant thereof, the oscillation frequency of the oscillation circuit 20 can be adjusted. For example, when the load is a variable capacitance element, changing the voltage applied to the variable capacitance element, as shown in Fig. 14, results in a change in capacitance of the variable capacitance element, and thus the oscillation frequency of the oscillation circuit 20 is changed.
